

WEEKLY NEWSLETTER NO. 37

April 17, 1957

25X1A9a

[REDACTED] arrived at McGuire Air Force Base April 15 and reported at the plant April 16. John reports that he left all his equipment in good condition at Detachment A. [REDACTED] has been briefed so that he can cover in an emergency. John will spend approximately 29 days in the States vacationing and coming to the plant for a few days to be briefed on recent developments before returning to Detachment A.

We received no mail this week from any of our other field reps.

On Friday, April 12, we returned instrument No. 35 to [REDACTED] at [REDACTED]

25X1A6a

[REDACTED] and will return No. 36 this week which is home for the heated bubble modification and a new half silvered mirror. We will also ship 15 glass lenses to [REDACTED], Warehouse B. The Mark III handles are currently being assembled and a partial shipment will be made on Friday. We ran into a bit of difficulty with the heated bubble and it had to be removed from instrument No. 35 in which we reported that it would be installed. The difficulty seems to be a minor one resulting from a clash between the optical retrofit program and the heated bubble program. We are making a few minor changes which should straighten the problem out before next week.

Will write again next week.
